
RPTU Summer School on RDM

Cristina Martins Rodrigues

17th July 2023

Agenda

covering the aspects of Research Data Management

	Monday (17.7.)	Tuesday (18.7.)	Wednesday (19.7.)	Thursday (20.7.)	Friday (21.7.)
09:00 - 10:30	Opening / Keynote *Rodrigues*	Versioning & Collaboration *Garth*	Organization and Archives *Wetzels*	Workflows and Data Processing *Garth / Kappe*	RDM Planning *Josch / Niederprüm*
	coffee break	coffee break	coffee break	coffee break	coffee break
11:00 - 12:30	Process Models *Mühlhaus*	Versioning & Collaboration *Garth*	Databases *Doniparthi*	Workflows and Data Processing *Garth / Kappe*	Closing + Open Session *all*
	lunch break	*lunch break*	*lunch break*	*lunch break*	
14:00 - 15:30	Process Models *Mühlhaus*	Galaxy *Gallardo Alba*	group hike & Bremerhof dinner	RDM in practice *Brillhaus*	

Data PLANT

Agenda

covering the aspects of Research Data Management

	Monday (17.7.)	Tuesday (18.7.)	Wednesday (19.7.)	Thursday (20.7.)	Friday (21.7.)
09:00 - 10:30	Ope *Rod* 	Ver *Gar* 	Orga *Wetz* 	Wo g *Ga* 	RDM *Josch* 
11:00 - 12:30	Proc *Mühlhaus*	Ver *Garth*	Data *Doniparthi*	Wo g *Garth / Kappe*	Closi *all*
14:00 - 15:30	Proc *Mühlh* 	Ga *Gal* 		RDM in pract *Brill* 	

Data PLANT

Why Research Data Management?

Relevance of research data management

https://youtu.be/N2zK3sAtr-4

Data PLANT

Benefits of research data management

- Fast Findability of Data
- Knowledge Preservation
- Avoid Data Loss
- Referenceability
- …

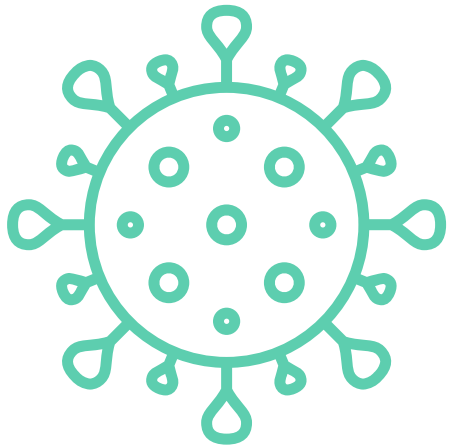
Data PLANT

Research Data Life Cycle

Data PLANT

Benefits of research data management

based on the example of Covid-19



Data PLANT

Your data as part of the big picture

Data PLANT

Your data as part of the big picture

Data PLANT

Research Data Management

Is part of Good Research Practice

Guidelines for Safeguarding Good Research Practice

Code of Conduct

https://zenodo.org/record/6472827

Data PLANT

What is Research Data Management?

What is Research Data Management?

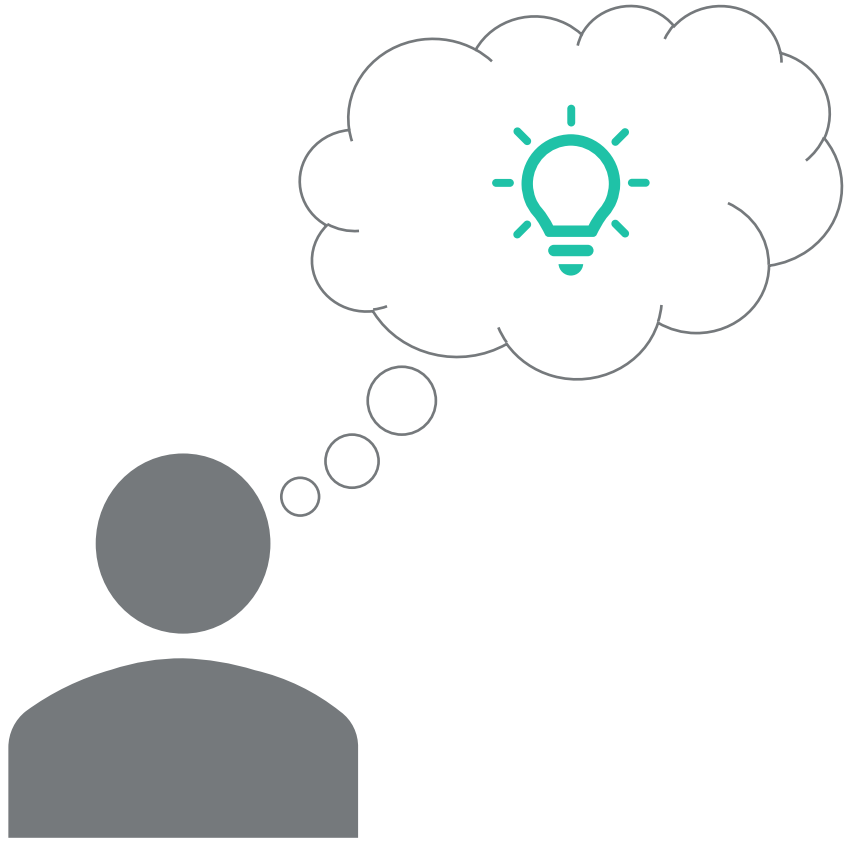
for each of us?

State something about the following:

- Who am I
- What area do I come from
- What data do I work with
- What does research data management mean for me
- What do I expect from this Summer School

Reproducibility of results

is a fundamental aspect of scientific integrity



Reproducibility of results

is a fundamental aspect of scientific integrity

ontologies

Meta data need to “speak“ the same language

Data PLANT

Findable means…

(Meta)data should be easy to locate for both humans and computers. Machine-readable metadata are essential for automatic discovery of datasets and services.

- F1. (Meta)data are assigned a globally unique and eternally persistent identifier
  - Stability to locate and cite the data
  - Persistent identifier (PID) e.g. a Digital Object Identifier (DOI)

- F2. Data are described with rich metadata (see also R1.)
  - Necessary context information for the correct interpretation
  - Administrative metadata (author, license, etc.)

Data PLANT

ORCID
Connecting Research and Researchers

Findable means…

(Meta)data should be easy to locate for both humans and computers. Machine-readable metadata are essential for automatic discovery of datasets and services.

- F3. (Meta)data are registered or indexed in a searchable resource
  - Metadata are used to create easily searchable indexes of records
  - Basis for an information platform
- F4. Metadata specify the data identifier
  - The association between the metadata and the dataset is established by identifying the PID in the metadata

Accessible means…

Data and metadata should be archived long-term and made available by standard communication protocols for easy retrieval by machines and humans.

- A1. (Meta)data are retrievable by their identifier using a standardized communications protocol
  - Data retrieval should be possible without specialized tools
    A1.1 The protocol is open, free, and universally implementable
    A1.2 The protocol allows for an authentication and authorization procedure
- A2. Metadata are accessible, even when the data are no longer available
  - Dataset need a landing page

Interoperable means…

Data should be available in a format that allows exchange, interpretation and (semi-)automatic combination with other data.

- I1. (Meta)data use a formal, shared, and broadly applicable language for knowledge representation
  - Using controlled vocabularies/ontologies/thesauri and a clearly defined framework e.g., in the sense of the Semantic Web
  - Data need to interoperate with applications or workflows for analysis, storage, and processing
- I2. (Meta)data use vocabularies that follow FAIR principles
  - Controlled vocabularies must be properly identified (referenceable) and documented

Interoperable means…

Data should be available in a format that allows exchange, interpretation and (semi-)automatic combination with other data.

- I3. (Meta)data include qualified references to other (meta)data
  - Relationships between datasets must be specified in the (meta)data
  - Datasets must be referenced and linked

Reusable means…

Metadata and data should be well-described so that they can be replicated and/or combined in different settings.

- R1. Meta(Data) have a plurality of accurate and relevant attributes
  - Extensive description of the data generation process. This may include e.g. experimental protocols, the manufacturer of the machine or sensor used for data creation, the software used for analyses, etc.

  - R1.1: (Meta)data are released with a clear and accessible data usage license
  - R1.2: (Meta)data are associated with detailed provenance
  - R1.3. (Meta)data meet **domain-relevant community standards**
